Assignment 1: Student Marks Analyzer

Problem statement: Create a JavaScript program to analyze student marks and generate a performance report.

Tasks :

1. Store a student's name, roll number, department, and marks in five subjects using appropriate variables and data types.
2. Store the five subject marks in an array.
3. Write a function `calculateTotal(marks)` to calculate the total marks.
4. Write a function `calculatePercentage(marks)` to calculate the percentage.
5. Write a function `findHighest(marks)` to find the highest mark.
6. Write a function `findLowest(marks)` to find the lowest mark.
7. Count how many subjects have marks greater than or equal to 40.
8. Convert the student's name to uppercase and display the number of characters in the name.
9. Display the final report with the student's details, total, percentage, highest mark, lowest mark, and number of subjects passed.

Sample input

```
let name = "Rahul Kumar";
let rollNo = 101;
let marks = [78, 85, 62, 91, 34];
```

Expected output

```
Student: RAHUL KUMAR
Roll Number: 101
Total Marks: 350
Percentage: 70%
Highest Marks: 91
Lowest Marks: 34
Subjects Passed: 4
```

Bonus challenge: Create a function that accepts the marks array and returns `"Excellent"`, `"Good"`, `"Average"`, or `"Needs Improvement"` based on the percentage.
